WHY COMPOST?
Composting is nature’s way of recycling. It is a satisfying way to turn your fruit, vegetable and yard trimmings into a dark, crumbly, sweet-smelling soil conditioner.

COMPOSTING:
• Saves you money by lowering garbage bills and replacing store-bought soil conditioners.
• Helps garden and house plants by improving the fertility and health of your soil.
• Saves water by helping the soil hold moisture and reducing water runoff.
• Benefits the environment by recycling valuable organic resources and extending the life of our landfill.

THE 4 “R’S” OF THE YARD
REDUCE the amount of yard trimmings you make by planting slow-growing, drought-tolerant plants.
REUSE yard trimmings by grasscycling (mowing more often, and leaving the clippings on the lawn) and by mulching fallen leaves and chipped prunings (spread them 6” deep on paths and around trees and shrubs).
RECYCLE remaining yard trimmings by composting. This brochure shows you how.
RESTORE the environment with thriving gardens. It all starts at home!

IN THE GARDEN
Before planting, mix a 4” to 8” layer of compost into newly reclaimed or poor soils. Mix a 1/2” to 3” layer of compost into annual garden beds at least once a year. Compost will add nutrients and beneficial microbes, hold water, and improve plant growth.

AROUND THE YARD
Spread a 1” to 6” layer of coarse compost on soil as a mulch, or spread a 1/2” layer of sifted, weed-seed-free compost on turfgrass as a top dressing. These can be done any time of year to improve soil fertility and reduce watering needs.

ON HOUSE PLANTS
Sprinkle a thin layer of compost over house-plant soil to provide nutrients. You can also make a great potting soil by mixing one part compost with two parts sand and/or soil.

DON’T HAVE A GARDEN?
You can still make compost and use it on a house plant, give it to a friend, sprinkle it around a street tree, or use it in a community garden.
CHOOSE A SYSTEM

SYSTEMS FOR FOOD AND YARD TRIMMINGS

RODENT-RESISTANT BINS
- For fruit, vegetable and yard trimmings (using “Mixed” compost recipe)
- For yard trimmings alone (using “No-Fuss” recipe)
- Bins require a lid, floor and no holes bigger than 1/4”

OPEN PILES & SIMPLE BINS
- For yard trimmings ONLY
- Requires “Active” composting and weekly turning to keep animals out
- Usually inexpensive or free

SYSTEMS FOR JUST FOOD TRIMMINGS
For more information about the following, see the Composting Fruit & Vegetable Trimmings brochure:

Worm Bins
- Most fun! Takes some time and effort
- For indoors or outdoors
- Produces excellent fertilizer

Closed-Air Systems
- Low maintenance
- Prone to odor & insect problems

Underground Composting
- Requires digging a hole each time you add new materials
- No harvesting necessary

REMEMBER... Whenever you compost fruit and vegetable trimmings, the Health Department requires a rodent-resistant system. Use a container with a lid, a floor, and no holes bigger than 1/4 inch, or bury food scraps at least one foot under the soil surface. For more information about bins, see the Compost Bins – Sources and Designs brochure.

FOLLOW THE BASICS

THANKS TO FRIENDLY BUGS AND WORMS, COMPOSTING IS AS EASY AS “1-2-3” - no matter which recipe you use!

1. chop materials if you want them to break down more quickly.

2. mix “browns” (dry, woody materials) with “greens” (moist, green materials).

3. maintain air and water balance by keeping compost as moist as a wrung-out sponge.

Browns, Greens, Air and Water are the “big four” that will keep every compost pile happy.

RECIPE FOR RODENT-RESISTANT BINS

“NO-FUSS” COMPOST
For yard trimmings ONLY. Requires a rodent-resistant bin to prevent animal nesting.

ingredients:
- Yard trimmings only (browns & greens)
- Water as needed

directions:
- Feed chipped or unchopped yard trimmings into bin as you generate them.
- Maintain compost by keeping it as moist as a wrung-out sponge.
- Harvest rich, brown, finished compost from the bottom and center of the pile after 12 to 18 months.

“MIXED” COMPOST
For fruit, vegetable & yard trimmings together. This recipe requires a rodent-resistant bin and active maintenance to prevent animal nesting and feeding.

ingredients:
- Fruit, vegetable and yard trimmings (browns & greens)
- Water as needed

directions:
- Feed yard trimmings to your pile as you generate them by chopping them first into pieces 6” or smaller.
- Food scraps need to be buried and mixed into the center of the pile. Never dump and run! Be sure to mix in enough browns to balance your greens.
- Harvest rich, brown, finished compost by sifting out coarse, unfinished materials after 3 to 8 months.

troubleshooting

symptoms problems solutions
Pile not composting Too dry Add water until slightly damp & turn (mix)

Too much brown matter Add fresh green matter or organic nitrogen fertilizer & turn

Pile smells rotten/attracts flies Too wet/too many food scraps or lawn clippings Turn & add browns (dry, woody materials) or dry soil

Food scraps exposed Bury & mix food scraps into pile

Non-compostables Remove meat, dairy, grease, etc. & turn

Rodents in pile Food scraps in open bin/ holes larger than 1/4 inch/non-compostables Use traps or baits, rodent-proof bin, remove meat, grease, etc. & turn
